                             The present invention describes an isolated antibody that binds to one of the human PRO proteins designated PRO212, PRO290, PRO31, PRO105, PRO105, PRO1050, PRO2051, PRO2145 OR PRO20519. PRO POLYPROSON CC and prevention of cancer. The antibodies and other anti-tumour compounds and prevention of cancer. The antibodies and other antibodies and other compounds include benign or malignant tumours (e.g., renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulva, thyroid, hepatic carcinomas, sarcomas, globlastomas, and various head and neck tumours), leukaemias and lastrocytal, hypothalamic and other glandular, macrophagal, epitherial actional disorders, Adc386, represent PCR primers and hybridisation probes used in the isolation of the human PRO sequences. Adc58367 to AAC5836 represent human PRO contine inventing and protein sequences given in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                             232
                                                                                                                                                                                                                                                                                                                                                                                                                    133

 The invention relates to human PRO polypeptides and the polynucleotides encoding them. The sequences are useful in the preparation of a medicament for treating a condition responsive to a PRO polypeptide. The polypeptides are useful in a number of functional biological assays, as molecular weight markers for protein electrophoresis and as therapeutic

 The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 123 fully defined sequences as given in the specification (including their extracellular domains either given in the specification (including their extracellular domains either or thous their associated signal peptides. Also include are the nuclectide (NA) sequences encoding PRO, a vector comprising the PRO NA, a host cell comprising the evector, producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. Pro is useful as molecular weight markers for protein electrophoresis and also for chromosome identification. PRO is also useful for tissue typing. PRO and PRO NA are useful as hybridisation probes for a cDNA library to isolate the full-length PRO cDNA. PRO NA is useful for generating transgenic animals or knock-out animals which are useful in development and screening useful reagence. PRO NA is also useful in gene therapy. PRO1244, PRO1266 and PRO1303 polypeptides are useful for treating cancerous tumours. PRO1350, PRO1418 and PRO1410

polypeptides are useful for suppressing immune response. PRO1246 polypeptide is useful for treating cardiac insufficiency disorders. PRO1246 polypeptide is also useful for treating tunours. PRO1246 and PRO1561 polypeptide are useful for stimulating calcium flux in human umbilical vein endothelial cells. PRO1265, PRO1250 and PRO1474 polypeptides are useful for treating bone and/or cartilage disorders (e.g., arthritis) and wound healing. PRO1130, PRO1275 and PRO1418 polypeptides are useful for treating diabetes in skeletal muscle cells and obesity. PRO1265, PRO1244 and PRO1382 polypeptides are useful for treating diabetes in skeletal muscle cells and obesity. PRO1265, PRO1244 and PRO1382 polypeptides are useful for treating dispetes in skeletal muscle cells treating Berger disease or other nephropathies associated with Schonlein-Henoch purpura, coellac disease, dermatitis, herpetiformis or Crohn's disease. PRO1478, PRO1265, PRO1412, PRO1279, PRO1306, PRO1418, PRO1410 and PRO155 are useful in treating thalassaemias. The present sequence encodes a PRO protein of the invention.

 Novel isolated PRO polypeptide useful for tissue typing, modulating biological activity of cell, as molecular weight markers in protein electrophoresis, for treating arthritis, tumor.
 Query Match 87.3%; Score 3060.8; DB 9; Length 3143; Best Local Similarity 99.9%; Pred. No. 0; Matches 3062; Conservative 0; Mismatches 2; Indels 0;
 The invention relates to an isolated PRO polypeptide (secreted

 t
 The invention relates to an isolated PRO polypeptide (secreted or
 Novel secreted and transmembrane PRO polypeptides useful in the preparation of a medicament for treating a condition responsive polypeptide and as therapeutic agents e.g. vaccines.

 Title:
Perfect score:
 Scoring table:
 Database :
 Searched:
 Sequence:
 Run on:
```

Pred. No. is the number of results predicted by chance to have a

em\_htgo\_hum:\* em\_htgo\_mus:\* em\_htgo\_other:\*

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Anote="Sema; Region: Sema domain. The Sema domain occurs in semaphorins, which are a large family of secreted and transmembrane proteins, some of which function as repellent signals during axon guidance. Sema domains also occur in the hepatocyte growth factor receptor"

Abo xxef="CDD:pfamol1403"

1683. 1817

Anote="SPSI; Region: domain found in Plexins, Semaphorins and Integrins"

16458.288 Million cell updates/sec
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/done liber-nature formations of the following liber in the following force: pT713-Pac (Pharmacia) with a modified polylinker; Site1: EccR I; Site2: Not I; Modified polylinker; Site1: EccR I; Site2: Not I; Not CGAP DTI is a normalized cDNA library containing the following tissue(s): Metatastic Chondrosarcoma in Lung. The library was constructed according to Bnonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digsted with Not I, and cloned directionally into pT713-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT) Ha tail. The sequence tag for this

/note="Organ: Bone; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: Book 1; Site_2: Not 1: modified polylinker; Site_1: Book 1; Site_2: Not 1: Not CAAP FHO is a cDNA library containing the following tissue(8): Human Grade 1 Chondrosarcoma Cell Line The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into PT7T9-Pac vector: The oligomorlectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AGAATCGGC. The cell line was provided by Dr James Martin from University of Lowa TAG TISSUE-Human Chondrosarcoma Cell Line CSB - Grade 1

New cDNAs, which are differentially expressed in (metastatic) breast cancer useful for diagnosing or staging, breast cancer, or for monitoring the treatment of breast cancer in an individual.

Claim 1; SEQ ID NO 69; 30pp; English.

The invention describes a combination of cDNAs (designated BC-cDNAs), which are differentially expressed in breast cancer. The combination includes 152 cDNA sequences, or their complements. The protein encoded by any of these BC-cDNAs is useful for screening several molecules or compounds to identify at least one ligand that specifically binds the protein, producing or preparing polyclonal or monoclonal antibodies, or purifying antibodies from a sample. The antibodies, which specifically bind the protein differentially expressed in breast cancer is useful for detecting the expression of a protein in a sample. The BC-cDNAs are also useful for diagnosing, monitoring the treatment of, or staging, breast

methylation; cancer; colon cancer.

The invention relates to a combination comprising cDNAs which are expressed in a disorder or process associated with DNA methylation. The combination and cDNAs are useful for diagnosing, staging, treating or monitoring treatment of cancer, e.g. colon cancer and for detecting changes in expression of genes encoding proteins that are associated with DNA methylation. The protein is useful for screening molecules or compounds to identify at least one ligand that binds to the protein and for producing an antibody. The present sequence represents a cDNA expressed in a disorder or process associated with DNA methylation

The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polymucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits is increased or decreased expression in lung cancer samples. Lung cancer-associated polymucleotides and polympetides are used for identifying a compound that modulates a lung cancer-associated polympetide, for inhibiting proliferation of a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by cancer in a patient and for treating a mammal having lung cancer, non-small cell for treating a modulatory compound identified. The methods are useful for treating used to the cancer or other benign or precancerous lesions, e.g. atelectasis, lung cancer or other benign or precancerous lesions, e.g. atelectasis, hypersensitivity pneumonitis, interstitial pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary fibrosis are useful bronchiectasis. The genes, polymucleotides and polypeptides are useful compounds that modulate lung cancer, such as antibodies. Sequences compounds that modulate lung cancer, such as antibodies. Sequences

ABX76124-ABX76474 represent lung cancer-associated polymucleotides of the

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain recombinant production of (II). The polymucleotides are also used and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed cartivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics formsics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and and confing sequences. Asset197-AAS94564 represent novel human diagnostic coding sequences. Asset197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pot_sequences

 The invention describes an isolated human enzyme peptide (I) that is related to the helicase family. (I), its allelic variant, orthologue or fragment is useful for identifying a modulator of a human enzyme peptide. The method optionally involves contacting a cell expressing the peptide with an agent and determining if the agent has modulated the expression of the peptide. (I) and the polynucleotide encoding it (III) can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents that modulate enzyme activity in

cells and tissue that express the enzyme. The proteins can also be used in screening assays to screen a compound for its ability to stimulate or influence that normally interacts with the enzyme protein. The protein also provide a target for diagnosing a disease or predisposition to disease mediated by the compound analysis. The peptides are also useful for treating a disorder characterised by altered expression of the protein e.g. carcinoma. Anti-(1) antibodies are also useful for assessing to remain and aberrant subcellular localisation of cells in various tissues in an organism, in pharmacogenomic analysis, for tissue typing and for inhibiting protein function. The nucleic acid molecules are useful for constructing recombinant vectors, host cells and transgenic animals, and for designing recombinant vectors, host cells and transgenic animals, and for exceeding assays and as a target for treatment by the compounds of careful in diagnostic assays for qualitative changes in expression of useful in diagnostic assays for qualitative changes in expression of assesse or susceptibility to disease which results from altered to active protein. (III) also provides vectors for gene encoding enzyme therapy in patients with aberrant expression of gene encoding enzyme. This sequence encodes the novel human protein deleted in cancer I (DICEI) will be protein, a candidate tumour suppressor gene

The invention relates to a new protein, human DICE1-like RNA helicase (deleted in cancer 1, a tumour suppressor gene). The protein may be a an allalic variant or orthologue encoded by a nucleic acid molecule that hybridises under stringent conditions to the CDNA and gene appearing as CC hybridises under stringent conditions to the CDNA and gene appearing as ACA63028 and ACA63029, or a fragment of the DNA and gene appearing as CC acids. Also included are an antibody selectively binding to the helicase, a gene chip comprising nucleic acids melibrody selectively binding to the helicase, comprising the nucleic acid molecule, a uncleic acid vector comprising the nucleic acids in a sample, identifying agents that bind to comprising a disease or condition mediated by a human anixyme could condition an isolated human enzyme peptide having an amino sequence that protein, an isolated human enzyme peptide having an amino sequence that condition an isolated human enzyme peptide, where the nucleic acid molecule encoding a human enzyme peptide, where the nucleic acid molecule encoding a human enzyme peptide, where the nucleic acid molecule are at east 80% homology with the cDNA or gene. The methods are useful for detecting the presence of any of the claimed peptides, an agent that binds to condition mediated by a human enzyme protein. The human enzyme peptide, an agent that binds to condition mediated by a human enzyme protein. The human enzyme peptides and nucleic acid molecules are useful as models for development of human therapeutic agents that modulate enzyme condition acidisted by a human enzyme protein. The human enzyme proteins, or as targets for the development of human therapeutic agents that modulate enzyme conditions or disorders associated with the absence of, inappropriate, or unwanted expression of the protein, e.g. carcinomas. The peptides or unwanted expression of the protein, e.g. carcinomas. The peptides or

 The present sequence encodes human sqbh3.10 (SAGE), a sarcoma-associated gene product (I). Agents, specifically sarcoma associated nucleic acids (II) or thair expression products that are tumour rejection antigens artigens artigens (TRA), that selectively increase formation of HLA (human leucocyte antigen)/(I) complexes are used for treating cancer, especially sarcoma antigens, in humans and other animals. Compositions containing a ucologous cytolytic T cells (CTL), specific for the HLA/(I) complex, are similarly useful, also transformed cells that stimulate such CTL in vivo. (II) are also used: (I) as source of therapeutic antisense sequences that reduce expression of (II); (ii) for recombinant production of (I); (iii) particularly its fragments, as primers and probes in usual hybridisation can amplification assays, for diagnosis, prognosis and monitoring of tumours, or for measuring binding specificity of HLA molecules or CTL clones; (iv) to identify related sequences; and (v) for generating transgenic animals, e.g. for studying cancer and immune responses to it. (I) are used to raise specific antibodies (Ab) and therapeutically. Ab are used to diagnose tumours in immunoassays, also for delivering drugs, toxins, imaging agents etc. to (I)-expressing cells

 This invention relates to the DNA and protein sequences of a novel polypeptide-human tumour suppressor protein DICEL-98-61.27. The invention also comprises a method for producing the protein by recombinant DNA technology and the application of the polypeptide in treating several diseases such as diabetes and tumours. Also disclosed is an antagonist against the polypeptide, methods for its therapeutic action, and the application of the polymucleotide to coding this new human tumour suppressor protein DICEL-98-61.27. The present sequence represents the cDNA encoding the human tumour suppressor protein DICEL-98-61.27 of the

 The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions, and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present DNA sequence represents a gene of the
 New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.

 The invention relates to human cysteine protease 10.89 (ABP58982) and mucleic acids encoding it (AB270855). The protein has a molecular weight of 10.89 kD. The invention also relates to a method for the recombinant production of the protein, an antagonist of the protein, and the use of the protein, gene and antagonist in therapeutic applications. Cysteine protease 10.89 can be used in the treatment of a variety of diseases such as neuropathy, tumours, developmental disorders (particularly embryonic development disorders), immune disorders and inflammatory conditions. The present sequence represents cDNA encoding human cysteine protease 10.89

contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.

 NOTE: This is a 'working draft' sequence. It currently consists of 14 conties. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will

num 20, 2003 this sequence version replaced gi.18121499.
During sequence assembly data is comparated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: FMBL; Sw: SWISSRROT; Tr:, TREMBL; Wp:, WORWHEP; Information
on the WORWHEP database can be found at
http://www.aanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome X; constructed by the Sanger Centre Chromosome X Mapping
Group. Purther information can be found at
thttp://www.anger.ac.uk/HGPP/ChX
RP13-36C9 is from the library RPCI-13.1 constructed by the group of
Platter de Jong. For further details see

 AL590618 115916 bp DNA linear PRI 20-JUN-2003 Human DNA sequence from clone RP13-36C9 on chromosome X, complete sequence.
 This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality dated (i.e., phred quality > 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

 variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequencing than alternate chemistry or covered by high quality data (i.e., phred quality) = 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMIL; SWI, SMISSROT; Tr.; TREMBL; Wp.; WORMPEP; Information on the WORMPEP database can be found at the WORMPEP database can be found at the work was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group.

Ently://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group.

 NOTE: This is a 'working draft' sequence. It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
